
Hosting and email services

an introduction:
Hosting “Web Hosting” - Domain Name - Internet Protocol (IP) of the server
All these terms are very important, and they must be known by anyone who wants to create their own website on the Internet, you must first obtain a hosting service from our company To host the contents of your site, then you reserve the domain through our company as well - which is the name or address of the site that takes the browser to the desired site - and then you connect your domain to the hosting through the Internet Protocol (IP) of the server.

What is hosting?
It is a group of computers connected to each other across the world, with very high specifications, and they are permanently connected to the Internet to reach them at the highest speed from anywhere in the world, bear a high data transfer rate, and they are called servers. These servers host Website contents (images-html-files-videos and other files that make up your site) and these servers must be secured from hacking.
